

REPTILES

WHAT MAKES REPTILES DIFFERENT FROM AMPHIBIANS?

REPTILE HISTORY

- ◎ 350 Million years ago- Carboniferous period
 - Reptiles appear from amphibian relatives
 - During this time the earth was cooling and became less humid
- ◎ Mammal-like reptiles appeared around 245 MYA
- ◎ Reptiles, dinosaurs dominated the Triassic period - 215 million years ago

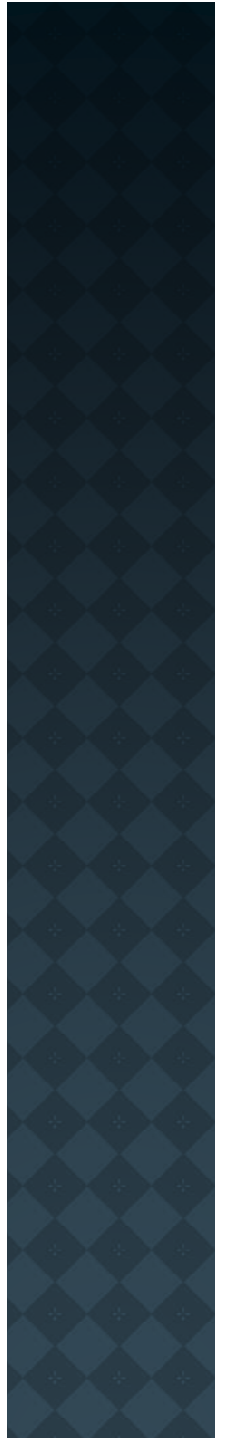

KINDS OF DINOSAURS

- ⦿ Ornithischia: “Bird-hipped” dinosaurs
- ⦿ Saurischia: “Lizard-hipped” dinosaurs

THE END OF THE DINOSAURS

- ◎ 65 million years ago
 - What happened?

- ◎ What were the results for other living creatures?

YOUR ASSIGNMENT

- ◎ Look up 2 total dinosaurs
 - 1 herbivores from Ornithischia
 - 1 carnivore or 1 herbivore from Saurischia
 - Describe their:
 - Physical form and size
 - Characteristics of how they lived
 - Behavior, Reproduction, Diet
 - Cool things about them
- ◎ Research details about what happened to the dinosaurs 65 MYA
